

Threat Intelligence Report: MOVEit Transfer Supply Chain Attack (2023)

Executive Summary:

This threat intelligence report analyzed the 2023 MOVEit Transfer supply chain attack, focusing on attacker behavior, exploited vulnerabilities, and the broader impact on affected organizations. The analysis leveraged publicly available advisories, CVE data, and threat intelligence reporting.

The report examined how attackers exploited a zero-day vulnerability to gain unauthorized access, exfiltrate sensitive data, and impact downstream organizations through third-party software dependencies. Tactics and techniques were mapped to the MITRE ATT&CK framework to contextualize adversary behavior.

Key takeaways include the importance of third-party risk management, timely patching, monitoring for anomalous data access, and maintaining incident response readiness for supply chain-related threats.
